Journal of
MEDICAL SYSTEMS
Volume 16, 1992

Journal of Medical Systems is designed to provide a forum for presentation and discussion of the increasingly extensive applications of new systems techniques and methods in hospital, clinic, and physician's office administration; pathology, radiology, and pharmaceutical delivery systems; medical records storage and retrieval; and ancillary patient-support systems. The journal publishes articles, essays, and studies across the entire scale of medical systems, from large hospital programs to novel small-scale medical services. Education is an integral part of this amalgamation of sciences, and selected articles are published in this area. Since existing medical systems are constantly being modified to fit particular circumstances and to solve specific problems, the journal includes a special section devoted to status reports on current installations. Short communications of a less technical nature are published as Letters to the Editor. These must contain objective data, allowing independent verification and comparison with other existing or proposed systems.
